

**EXTRACT FROM UVO HÖLSCHER AND  
GEORG STEINDORFF article (1909) about  
Funerary Temple of Chephren:**

**‘Die Ausgrabung des Totentempels der Chephrenpyramide  
durch die Sieglin-Expedition 1909’**

**(‘The Excavation of the Funerary Temple of the Chephren  
Pyramid by the Sieglin Expedition of 1909’)**

**From:**

***Zeitschrift für Ägypt. Sprache ...*, Volume 46, 1909, pp. 1-12.**

**The extract of a paragraph comes from pp. 9-10:**

**Also very interesting is the discovery of an admittedly rather simple drainage system in the courtyard (Figure 4). It consists of a semicircular channel of granite. It lies open for an extent of roughly 3 metres, and then it disappears under a covering stone of granite, which itself is then again covered by a thin limestone slab. Then it continues under the pavement and reappears again south of the southern exterior walls at a great depth. Undoubtedly it served the purpose of leading the rain water out of the alabaster pavement of the courtyard.**
